Countroll® wireless NIP system for rollers

Optimize your roller and machine performances

The countroll® wireless nip system is a game-changer for industrial rollers. Specially designed for precise nip measurements, this system consists of three units that accurately measure nip width and crown factor, with real-time data accessible via the Countroll app. Thanks to its unique 3-nip design, you can easily adjust nip pressure and calculate the correct crown correction, leading to improved production efficiency and product quality.

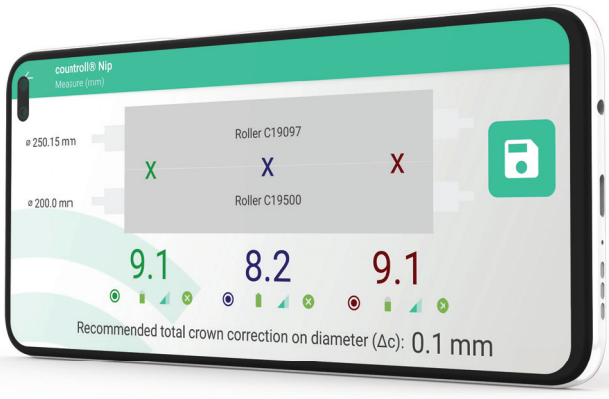
Ready to elevate your roller performance? The Countroll® NIP system ensures precision, reliability, and enhanced results with every use.

Easy access to your measurements thanks to the countroll® app

Nip Measurement: Instantly measure nip width across your rollers for accurate and reliable data. The app provides real-time insights, helping you monitor nip pressure with precision.

Crown Calculation: Automatically calculate the crown factor based on nip measurements. This allows you to fine-tune the crown correction, optimizing roller performance and product quality.

Roller Timeline Management: Easily add measurements and calculations to your roller's timeline. Track historical data and monitor changes over time, allowing you to make data-driven decisions for improved maintenance and efficiency.



Countroll® wireless NIP system for rollers

Contents of the Countroll® Nip System Case

- 3 Bluetooth NIP devices with 3 extra-long strips, specially designed for rollers
- 2 additional measuring strips
- 1 NipCheck to ensure accurate measurement by verifying the strips
- 1 Quick start guide
